HW6

My testing strategy involved me testing things on paper, implementing them and then writing the tests that would cause my code to replicate what my work on paper supposedly figured out.

I'll be honest, I struggled with selection sort for a long time. That sucker was tough but once I finally figured it out I was very satisfied. This was definitely an assignment where I used a lot of paper keeping track of nodes and variables as I would troubleshoot.

Selection sort is blue, Insertion sort is orange.
